Get Incidents by Date Range	13
Update an Incident	15
Remove an Incident	17
Add a Journal Entry	18
Get an Incident's Alerts	10

# **Overview**

The NetWitness Platform API can be accessed using the same host and port as the NetWitness user interface.

# **Current Version**

By default, all requests to the REST API will automatically use the latest version of the API available. To provide API stability, clients can specify the API version to use by adding the NetWitness-Version HTTP header:

NetWitness-Version: 1.0

# Schema

All data is sent and received as JSON. Any resources containing fields without values will have those fields included with null as the value instead of being omitted.

Any fields containing timestamps or dates will be in ISO 8601 format:

YYYY-MM-DDTHH:MM:SS.SSSZ

# **HTTP Usage**

The RSA NetWitness API tries to adhere as closely as possible to standard HTTP and REST conventions in its use of HTTP verbs and status codes.

### **HTTP Verbs**

Verb	Usage
GET	Used to retrieve a resource.
POST	Used to create a new resource.
PATCH	Used to update an existing resource, including partial updates. Only fields that are modified should be included in the request.
PUT	Used to replace an existing resource.
DELETE	Used to delete an existing resource.

## **HTTP Status Codes**

Status code	Usage
200 OK	The request completed successfully.

201 Created	A new resource has been created successfully. The resource's URI is available from the response's Location header.
204 No Content	An update to an existing resource has been applied successfully.
400 Bad Request	The request was malformed. The response body will include an error providing further information. See Error Response.
401 Unauthorized	Similar to 403 Forbidden, but specifically for use when authentication is required and has failed or has not yet been provided. See Authentication and Authorization.
403 Forbidden	The request was valid, but the server is refusing the action. The user might not have the necessary permissions for a resource.
404 Not Found	The requested resource does not exist.
500 Internal Server Error	An unexpected error has occurred. The response body will include a message providing further information.

# **Case Sensitive**

All URLs, request parameters and JSON fields are case sensitive.

# **Error Response**

A common JSON structure is always returned for errors:

Path	Туре	Description
status	Number	The HTTP status code returned.
timestamp	String	The timestamp of the request.
errors[]	Array	An array of errors for the given request.
errors[].message	String	A user-friendly error message explaining what went wrong.
errors[].field	String	The field or parameter containing the error.

```
{
    "status" : 400,
    "timestamp" : "2018-02-23T18:40:52.660Z",
    "errors" : [ {
        "message" : "Value must be less than or equal to \"10\"",
        "field" : "start"
    }, {
        "message" : "Invalid range"
    } ]
}
```

# **Pagination**

A common JSON structure is always used for paginated results:

Path	Туре	Description
items	Array	An array containing the requested resources.
pageNumber	Number	The requested page number.
pageSize	Number	The requested number of items to return in a single page.
totalPages	Number	The total number of pages available.
totalItems	Number	The total number of items available.
hasNext	Boolean	Indicates if there is a page containing results after this page.
hasPrevious	Boolean	Indicates if there is a page containing results before this page.

```
"items" : [ ],
   "pageNumber" : 0,
   "pageSize" : 10,
   "totalPages" : 3,
   "totalItems" : 25,
   "hasNext" : true,
   "hasPrevious" : false
}
```

# **Authentication and Authorization**

All requests must include the NetWitness-Token HTTP header containing a valid JSON Web Token (IWT):

#### NetWitness-Token:

eyJhbGciOiJSUzI1NiIsInR5cCI6IkpXVCJ9.eyJleHAiOjE1MTEyNDczODYyNjMsImlzcyI6InNlY3VyaXR5L XNlcnZlciOzODA1NTAOOSOxZWMyLTQOMDAtOTUwYSOzZTVkMmJiYTljMjIiLCJpYXQiOjE1MTEyMTEzODYyNjM sImF1dGhvcmlOaWVzIjpbIkFkbWluaXNOcmF0b3JzIlOsInVzZXJfbmFtZSI6ImFkbWluInO.StBjg9ruIX4Fr yfCX8qvrSBGZHF8DN3qHZMOEi9-

thFndm1q\_DLP\_cnh8Fpm43fdKcs1ErcVRTqhaYvVULYmsF9ShUaSThpLts6zbJVEK1q3ldUGWWCY9bfVGRH3n5 KmWzTTPi7x7-

Rf\_Kp2Sj8ecVAip3qDwha7TxYrReXefCnUj0UxgaaXjeZIFjwxFmK6NPZ7TAK9OcvcVhozaR8V92g1kUVP8\_54 x7iZ2jL4JvDPaScWBjBTvVEffHNbX9\_iLNoRmKqvDELSla6E\_trkSREogCt6pZh709Qh70uoC3BsKwNQKbHNEO U1tRPFaUFfRH7bCdp8v3Aeh3PTaKEuQA

The JSON Web Token is defined in RFC-7519. Tokens can be obtained using the methods outlined below.

In the remainder of this document, the token will be truncated to just eyJ...AT for brevity.

# **Obtaining a Token**

A JSON Web Token can be obtained using the methods below.

# Using a Username and Password

Users can retrieve an access token using their username and password credentials. Since the API gateway is secured using TLS, all credentials will be encrypted in transit.

POST /rest/api/auth/userpass

### **Request Parameters**

Parameter	Description	
username	The username of the account to authenticate.	
password	The password of the account.	

#### **Response Fields**

Path	Туре	Description
id	String	The account identifier.
roles	Array	The roles assigned to the user.

Path	Туре	Description
accessToken	String	A digitally signed access token that is acceptable as proof of authentication at any Launch service that trusts the public key of this service. The string holds a JSON web-token. See RFC-7519.
refreshToken	String	A digitally signed refresh token that can be used to refresh an expired access token. Refresh tokens have longer expiry periods and can be used by services to re-authenticate users without (storing and) presenting credentials.

## **Sample Request**

```
$ curl 'https://api.netwitness.local/rest/api/auth/userpass' -i -X POST \
   -H 'Accept: application/json; charset=UTF-8' \
   -H 'Content-Type: application/x-www-form-urlencoded; charset=ISO-8859-1' \
   -d 'username=ian&password=changeMe'
```

### Sample Response

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Transfer-Encoding: chunked
Date: Fri, 23 Feb 2018 18:39:38 GMT
Content-Length: 106
```

```
{
  "id" : "ian",
  "roles" : [ "Analyst" ],
  "accessToken" : "eyJ...AT",
  "refreshToken" : "eyJ...AT"
}
```

# Using a Refresh Token

Users can also retrieve an access token using a refresh token.

```
POST /rest/api/auth/token
```

### **Request Parameters**

Parameter	Description
token	A refresh token.

### **Response Fields**

Path	Туре	Description
id	String	The account identifier.
roles	Array	The roles assigned to the user.
accessToken	String	A digitally signed access token that is acceptable as proof of authentication at any Launch service that trusts the public key of this service. The string holds a JSON web-token. See RFC-7519.
refreshToken	String	A digitally signed refresh token that can be used to refresh an expired access token. Refresh tokens have longer expiry periods and can be used by services to re-authenticate users without (storing and) presenting credentials.

### Sample Request

```
$ curl 'https://api.netwitness.local/rest/api/auth/token' -i -X POST \
    -H 'Accept: application/json;charset=UTF-8' \
    -H 'Content-Type: application/x-www-form-urlencoded; charset=ISO-8859-1' \
    -d

```

#### Sample Response

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Transfer-Encoding: chunked
Date: Fri, 23 Feb 2018 18:39:39 GMT
Content-Length: 106
```

```
"id" : "ian",
  "roles" : [ "Analyst" ],
  "accessToken" : "eyJ...AT",
  "refreshToken" : "eyJ...AT"
}
```

# Authorization

In order to make requests through the NetWitness Platform API, users must belong to roles that have the integration-server.api.access permission, as well as any underlying permissions required to fulfill the request.

# **Incidents**

An Incident is a logically grouped set of alerts created automatically by the Incident Aggregation Engine and grouped by a specific criteria. An Incident, available in the Respond Interface, allows an Analyst to triage, investigate, and remediate these groups of alerts. Incidents can be moved between users, notated, and explored via the nodal graph. Incidents allow users to ensure they understand the full scope of an attack or event in their NW system and then take action.

# **Attributes**

The incident resource is comprised of the following attributes:

Path	Туре	Description
id	String	The unique identifier of the incident.
title	String	The title of the incident.
summary	String	The summary of the incident.
priority	String	The incident priority. See the valid values.
riskScore	Number	The incident risk score is calculated based on the associated alert's risk score. Risk score ranges from 0 (no risk) to 100 (highest risk).
status	String	The current status. See the valid values.
alertCount	Number	The number of alerts associated with an incident.
averageAlertRiskScore	Number	The average risk score of the alerts associated with the incident. Risk score ranges from 0 (no risk) to 100 (highest risk).
sealed	Boolean	Indicates if additional alerts can be associated with an incident. A sealed incident cannot be associated with additional alerts.
totalRemediationTaskCount	Number	The number of total remediation tasks for an incident.
openRemediationTaskCount	Number	The number of open remediation tasks for an incident.
created	String	The timestamp of when the incident is created.
lastUpdated	String	The timestamp of when the incident was last updated.
lastUpdatedBy	String	The NetWitness user identifier of the user who last updated the incident.
assignee	String	The NetWitness user identifier of the user currently working on the incident.
sources	Array	Unique set of sources for all of the alerts in an incident.

Path	Туре	Description
ruleId	String	The unique identifier of the rule that created the incident.
firstAlertTime	String	The timestamp of the earliest occurring Alert in this incident.
categories	Array	The list of categories this incident is categorized under.
categories[].id	String	The unique category identifier.
categories[].parent	String	The parent name of the category.
categories[].name	String	The friendly name of the category.
journalEntries	Array	Set of notes about the incident investigation, also known as the JournalEntry.
journalEntries[].id	String	The unique journal entry identifier.
journalEntries[].author	String	The author of this entry.
journalEntries[].notes	String	Notes and observations about the incident.
journalEntries[].created	String	The timestamp of the journal entry created date.
journalEntries[].lastUpdated	String	The timestamp of the journal entry last updated date.
journalEntries[].milestone	String	Incident milestone classifier. See the valid values.
createdBy	String	The NetWitness user id or name of the rule that created the incident.
deletedAlertCount	Number	The number of alerts that are deleted from the incident.
eventCount	Number	The number of events associated with incident.
alertMeta	String	An object containing unique set of meta values, by type, across all alerts associated with this incident.
alertMeta.SourceIp	Array	Unique source IP addresses.
alertMeta.DestinationIp	Array	Unique destination IP addresses.

# **Incident Priority**

The priority field can contain these values:

Value	Description
Low	Low Priority
Medium	Medium Priority
High	High Priority
Critical	Critical

# **Incident Status**

The status field can contain these values:

Value	Description
New	New incident.
Assigned	Incident is assigned to a user.
InProgress	Incident response is in progress.
RemediationRequested	Remediation tasks have been requested.
RemediationComplete	Remediation tasks are complete.
Closed	Incident is closed.
ClosedFalsePositive	Incident is closed as it was created due to false positive.

# **Milestone**

Each journal entry can contain a milestone consisting of these values:

Value	Description
Reconnaissance	Intruder is in the initial phase of the attack where targets and vulnerabilities are identified.
Delivery	Intruder transmitted malware to the target.
Exploitation	Malware code triggers, which takes action on target network to exploit vulnerability.
Installation	Malware weapon installs access point usable by intruder.
CommandAndControl	Malware enables intruder to have persistent access to target network.
ActionOnObjective	Intruder takes action to achieve their goals, such as data exfiltration, data destruction, or encryption for ransom.
Containment	Incident is contained.
Eradication	Necessary actions taken to eliminate components of incident and restore the system status.
Closure	Incident is addressed.

# **Requests**

# **Get a Single Incident**

A single incident can be retrieved using an incident's unique identifier.

GET /rest/api/incidents/{id}

### **Path Parameters**

Parameter	Description
id	The unique identifier of the incident.

# **Sample Request**

```
$ curl 'https://api.netwitness.local/rest/api/incidents/INC-100' -i \
   -H 'Accept: application/json;charset=UTF-8' \
   -H 'NetWitness-Token: eyJ...AT'
```

# **Sample Response**

HTTP/1.1 200 OK

Content-Type: application/json;charset=UTF-8

Transfer-Encoding: chunked

Date: Fri, 23 Feb 2018 18:42:20 GMT

Content-Length: 1329

```
"id" : "INC-100",

 }
}
```

# Get Incidents by Date Range

Incidents can be retrieved by the date and time they were created.

```
GET /rest/api/incidents
```

The requested date range can be unbounded, by only supplying either the since or until parameter, or bounded, by providing both parameters.

### **Request Parameters**

Parameter	Description
pageNumber	The requested page number.
pageSize	The maximum number of items to return in a single page.
since	A timestamp in ISO 8601 format (e.g., 1018-01-01T14:00:00.000Z). Retrieve incidents created on and after this timestamp.
until	A timestamp in ISO 8601 format (e.g., 1018-01-01T14:00:00.000Z). Retrieve incidents created on and before this timestamp.

All results will be returned using the paginated response payload sorted by the created date, in descending order.

## **Sample Request**

```
$ curl 'https://api.netwitness.local/rest/api/incidents?since=2018-01-
01T04%3A00%3A00.000Z&until=2018-01-01T05%3A00%3A00.000Z&pageSize=100&pageNumber=0' -i
    -H 'Accept: application/json;charset=UTF-8' \
    -H 'NetWitness-Token: eyJ...AT'
```

#### Sample Response

```
HTTP/1.1 200 OK

 "pageSize": 100,
 "totalPages" : 1,
 "totalItems" : 1,
 "hasNext" : false,
 "hasPrevious" : false
}
```

# **Update an Incident**

Currently an incident's status and assignee can be modified using the incidents endpoint.

```
PATCH /rest/api/incidents/{id}
```

The assignee field must include the unique identifier for a valid NetWitness user. The list of users can be found in the security section of the administration user interface.

### **Request Fields**

Path	Туре	Description
status	String	The current status. See the valid values.
assignee	String	The NetWitness user identifier of the user currently working on the incident.

# Sample Request

```
$ curl 'https://api.netwitness.local/rest/api/incidents/INC-100' -i -X PATCH \
   -H 'NetWitness-Token: eyJ...AT' \
   -H 'Accept: application/json;charset=UTF-8' \
   -H 'Content-Type: application/json;charset=UTF-8' \
   -d '{"status":"InProgress"}'
```

### Sample Response

HTTP/1.1 200 OK

Content-Type: application/json;charset=UTF-8

Transfer-Encoding: chunked

Date: Fri, 23 Feb 2018 18:42:20 GMT

Content-Length: 1330

```

 }
}
```

#### Remove an Incident

A single incident can be removed using the incident's unique identifier.

# DELETE /rest/api/incidents/{id}

### **Path Parameters**

Parameter	Description
id	The unique identifier of the incident.

### **Sample Request**

```
$ curl 'https://api.netwitness.local/rest/api/incidents/INC-100' -i -X DELETE \
   -H 'Accept: application/json;charset=UTF-8' \
   -H 'NetWitness-Token: eyJ...AT'
```

# **Sample Response**

```
HTTP/1.1 204 No Content
Date: Fri, 23 Feb 2018 18:42:22 GMT
```

# Add a Journal Entry

A journal entry, or note, can be added to an existing incident.

```
POST /rest/api/incidents/{id}/journal
```

### **Path Parameters**

Parameter	Description
id	The unique identifier of the incident.

### **Request Fields**

Path	Туре	Description
author	String	The NetWitness user id of the user creating the journal entry.
notes	String	Notes and observations about the incident.
milestone	String	The incident milestone classifier.

## **Sample Request**

```
$ curl 'https://api.netwitness.local/rest/api/incidents/INC-100/journal' -i -X POST \
    -H 'NetWitness-Token: eyJ...AT' \
    -H 'Accept: application/json; charset=UTF-8' \
    -H 'Content-Type: application/json; charset=UTF-8' \
    -d '{"author":"duke", "notes":"This incident is contained.", "milestone":"Containment"}'
```

# **Sample Response**

```
HTTP/1.1 201 Created
Location: https://api.netwitness.local/rest/api/incidents/INC-100
Date: Fri, 23 Feb 2018 18:42:22 GMT
```

### Get an Incident's Alerts

All the alerts that are associated with an incident can be retrieved using the incident's unique identifier.

```
GET /rest/api/incidents/{id}/alerts
```

#### **Path Parameters**

Parameter	Description
id	The unique identifier of the incident.

### **Request Parameters**

Parameter	Description
pageNumber	The requested page number.
pageSize	The maximum number of items to return in a single page.

### **Response Fields**

Path	Туре	Description
items	Array	An array containing the requested resources.
pageNumber	Number	The requested page number.
pageSize	Number	The requested number of items to return in a single page.
totalPages	Number	The total number of pages available.
totalItems	Number	The total number of items available.

Path	Туре	Description
hasNext	Boolean	Indicates if there is a page containing results after this page.
hasPrevious	Boolean	Indicates if there is a page containing results before this page.
items[].id	String	The unique alert identifier.
items[].title	String	The title or name of the rule that created the alert.
items[].detail	String	The details of the alert. This can be the module name or meta that the module included.
items[].created	String	The timestamp of the alert created date.
items[].source	String	The source of this alert. For example, "Event Stream Analysis", "Malware Analysis", etc.
items[].riskScore	Number	The risk score of this alert, usually in the range 0 - 100.
items[].type	String	The type of alert, "Network", "Log", etc.
items[].events	Array	The events that make up this alert.
<pre>items[].events[].source</pre>	Object	The source of the event.
<pre>items[].events[].source.device</pre>	Object	The device contains the endpoint network information.
<pre>items[].events[].source.device.i pAddress</pre>	String	The IP address.
<pre>items[].events[].source.device.p ort</pre>	Number	The port.
<pre>items[].events[].source.device.m acAddress</pre>	String	The ethernet MAC address.
<pre>items[].events[].source.device.d nsHostname</pre>	String	The DNS resolved hostname.
<pre>items[].events[].source.device.d nsDomain</pre>	String	The top-level domain from the DNS resolved hostname.
<pre>items[].events[].source.user</pre>	Object	The user contains the endpoint user information.
<pre>items[].events[].source.user.use rname</pre>	String	The unique username.
<pre>items[].events[].source.user.ema ilAddress</pre>	String	An email address.
<pre>items[].events[].source.user.adU sername</pre>	String	An Active Directory (AD) username.
<pre>items[].events[].source.user.adD omain</pre>	String	An Active Directory (AD) domain.
<pre>items[].events[].destination</pre>	Object	The destination of the event.
<pre>items[].events[].destination.dev ice</pre>	Object	The device contains the endpoint network information.
<pre>items[].events[].destination.dev ice.ipAddress</pre>	String	The IP address.

Path	Туре	Description
<pre>items[].events[].destination.dev ice.port</pre>	Number	The port.
<pre>items[].events[].destination.dev ice.macAddress</pre>	String	The ethernet MAC address.
<pre>items[].events[].destination.dev ice.dnsHostname</pre>	String	The DNS resolved hostname.
<pre>items[].events[].destination.dev ice.dnsDomain</pre>	String	The top-level domain from the DNS resolved hostname.
<pre>items[].events[].destination.use r</pre>	Object	The user contains the endpoint user information.
<pre>items[].events[].destination.use r.username</pre>	String	The unique username.
<pre>items[].events[].destination.use r.emailAddress</pre>	String	An email address.
<pre>items[].events[].destination.use r.adUsername</pre>	String	An Active Directory (AD) username.
<pre>items[].events[].destination.use r.adDomain</pre>	String	An Active Directory (AD) domain.
<pre>items[].events[].domain</pre>	String	The top-level domain or Windows domain.
<pre>items[].eventSource</pre>	String	The source of the event. This may be a fully-qualified hostname with a port, or simple name.
<pre>items[].eventSourceId</pre>	String	The unique identifier of the event on the source. For Network and Log events, this is the Nextgen Session ID.

# **Sample Request**

```
$ curl 'https://api.netwitness.local/rest/api/incidents/INC-
100/alerts?pageSize=10&pageNumber=0' -i \
   -H 'Accept: application/json;charset=UTF-8' \
   -H 'NetWitness-Token: eyJ...AT'
```

### **Sample Response**
