# RSA<sup>®</sup> NETWITNESS<sup>®</sup> Logs Implementation Guide

**Digital Guardian 6.1** 

Daniel R. Pintal, RSA Partner Engineering Last Modified: January 23, 2019

# **Solution Summary**

Digital Guardian is a comprehensive and proven Enterprise Information Protection platform. Digital Guardian serves as the cornerstone for policy driven, data-centric security by enabling organizations to solve the information risk challenges that exist in today's highly collaborative and mobile business environment. Digital Guardian's proven architecture makes it possible to implement a datacentric security framework from which business and IT managers can:

- Utilize actionable decision support reporting to assess the risk associated with the sharing of sensitive data, enabling managers to make informed business decisions and create effective data security policies
- Implement automated policy driven information protection controls, driving accountability down to the user resulting in voluntary compliance and increased risk aware behavior
- Alert, block and record high risk behavior ultimately preventing costly and damaging data loss incidents

With the RSA integration, Digital Guardian provides a rich data stream from laptops, desktops and servers, including a forensic log of data usage events, such as the user and application which accessed the data, the data event that occurs, and the classification of the data itself. Taking this data stream into RSA allows correlation with other security event data from the network, enterprise applications and other backend systems, dramatically increasing visibility for insider threat, malware detection and containment use cases.

RSA NetWitness Features					
Digital Guardian 6.1					
Integration package name	verdasysdgmc.envision				
Device display name within RSA NetWitness	verdasysdgmc				
Event source class	DLP				
Collection method	Syslog				

# **RSA NetWitness Community**

The RSA NetWitness Community is an online forum for customers and partners to exchange technical information and best practices with each other. The forum also contains the location to download the NetWitness Integration Package for this guide. All NetWitness customers and partners are invited to register and participate in the **RSA NetWitness Community**.

Once you have downloaded the NetWitness Integration Package, the next steps are to deploy this on all log decoders. For steps to disable or remove the NetWitness Integration Package, please refer to the <u>Appendix</u> of this Guide.

The RSA Netwitness package consists of the following files:

Filename	File Function
verdasysdgmc.envision	Netwitness package deployed to parse events from devices.
verdasysdgmcmsg.xml	A copy of the device xml contained within the NetWitness package.
table-map-custom.xml	Enables NetWitness variables disabled by default.
	÷

#### **Release Notes**

Release Date	What's New In This Release
1/23/2019	Revised guide for NetWitness integration support.
12/02/2013	Initial SA support for Verdasys Digital Guardian.

## **RSA NetWitness Configuration**

#### Deploy the enVision Config File

In order to use RSA Partner created content, you must first deploy the *Envision Config File* from the **NetWitness Live** module. Log into RSA NetWitness and perform the following actions:

**!** > Important: Using this procedure will overwrite the existing table\_map.xml.

- 1. From the NetWitness menu, select **Live > Search**.
- 2. In the keywords field, enter: **Envision**.
- 3. NetWitness will display the Envision Config File in Matching Resources.
- 4. Select the checkbox next to Envision Config File.

#### Deploy the RSA NetWitness Integration Package

After completing the previous section, <u>Deploy the enVision Config File</u>, you can now deploy the NetWitness Integration Package. Download the appropriate RSA Partner Integration Package, then log into RSA NetWitness to perform the following actions:

1. From the NetWitness menu, select **Admin > Services.** 

RSA RESPOND INVESTIGATE	MONITOR CONFIGURE ADMIN			ō \$ @	admin 🏾	
Hosts Services Event Sources Health & Wellness System Security						
Groups	Services					
+ - 🛛 O			💎 💿 log decoder	×		
Name	Name ^	Licensed Host	Туре	Version	Actions	
🕀 All 💶 👔	vm3112 - Log Decoder		Log Decoder	11.2.0.1	\$ ⊗	

2. Select your Log Decoder from the list, select **View > Config**.

System	View	>	
Stats	Delete		
Config	Edit		
Explore	Start		
Logs	Stop		
Security	Restart		

Important: In an environment with multiple Log Decoders, repeat on the deployment of the RSA Partner Integration Package on each Log Decoder.

3. Select the **Parsers** tab and click the **Upload** button.

4. From the *Upload Parsers* window, click the **+** Add button and select the *.envision* file.

**!** • Important: The .envision file is contained within the .zip file downloaded from the RSA Community.

5. Under the file name column, select the integration package name and click **Upload**.

Upload Parsers X						
+ -	— Delete					
File Name 🔨	Progress	Start Time	File Name	Status		
DigitalGuardian.envision						
			Cano	cel Upload		

6. Select **Cancel** to complete.

Upload Parsers	6000				×
+ -	-	Delete			
File Name ^		Progress	Start Time	File Name	Status
DigitalGuardian.envision			2019-01-23 16:14:36	DigitalGuardian	Completed
	1				
				Cancel	Upload

7. Connect to the RSA NetWitness Log Decoder Server using WinSCP. Copy the table-map-custom.xml file from the contents of the .zip file to the /etc/netwitness/ng/envision/etc folder. If the table-map-custom.xml file already exists on the Log Decoder(s), copy only the contents between the <mappings>...</mappings> to the table-map-custom.xml file located on the Log Decoder.

**Important:** Failure to utilize the contents of the table-mapcustom.xml will result in keys not being displayed within Investigator.

8. Navigate to Admin > Services and check the Log Decoder(s) then click Restart.

RSA RESPOND INVESTIGATE	MONITOR CONFIGURE ADMIN				ō.	Q @.	admin 🏾 🥐

							System Stats Config Explore Logs Security	Vlew Delete Edit Start Stop Restart	>

10. The new device is listed under the Log Decoder(s) General Tab within the Service Parsers Configuration.

Service Parsers Configu	iration	Enable All	Disable All
Name	Config Value		
varonisprobe			
verdasysdgmc			

11. The Log Decoder is now ready to parse events for this device.

# **Partner Product Configuration**

#### Before You Begin

This section provides instructions for configuring the Digital Guardian with RSA NetWitness. This document is not intended to suggest optimum installations or configurations.

It is assumed that the reader has both working knowledge of all products involved, and the ability to perform the tasks outlined in this section. Administrators should have access to the product documentation for all products in order to install the required components.

All Digital Guardian components must be installed and working prior to the integration. Perform the necessary tests to confirm that this is true before proceeding.

! Important: The configuration shown in this Implementation Guide is for example and testing purposes only. It is not intended to be the optimal setup for the device. It is recommended that customers make sure Digital Guardian is properly configured and secured before deploying to a production environment. For more information, please refer to the Digital Guardian documentation or website.

#### Digital Guardian Configuration

- 1. Log in to the Digital Guardian Management Console.
- 2. Use the **workspace > data** export tab use the **Hostname/IP address** of the RSA Security Analytics server. Use the data export type **Syslog**.

Data Export Wizard			x
Data Export Wi	ZARD		0
Data Export Details	Step 1 of 6: Setup D Setup some details in your o	ata Export Details <sub>lata export</sub> .	
Select Fields	Data Source:	Export Type:	
Configure Criteria	Syslog Settings		
Group Criteria	Type: UDP V		
Review Data Export	Server:		
Save Data Export	Specify host name or IP address Port:		
	514		
	Severity Level: Emergency		
	✓ Is Active		
			INEXT Cancel

3. Select only the following 63 fields to export. All fields must be selected. The alert severity field will be mapped to the magnitude field in Security Analytics. If the there is no severity, then the Syslog severity will be mapped.

Agent Local Date	Was Screen Captured
Agent Local Time	Was Source Classified
Agent UTC Date	Was Source File Captured
Agent UTC Time	Was Wireless
Application	Source Drive Type
Computer Name	Source Device Custom ID
Computer Type	Source Device Class
Email Sender	Source Device ID

Source File	Destination Device Storage Bus Type
Source IP Address	Destination Device Supports Predict Failure
URL Path	Destination Device Vendor
Was Destination Classified	Destination Device Vendor ID
Was Destination Removable	User ID

# Important: All 63 Fields must be selected alphabetically as shown above or log messages will not parse correctly within NetWitness.

4. Choose and configure the search criteria. By default, the Criteria field is blank. Selecting the criteria limits the amount of data exported. If no criterion is selected Digital Guardian will export all data (not recommended).

#### **NetWitness Disable Device Parser**

To disable the NetWitness Integration Package but not delete the XML from the system, perform the following:

1. Navigate to **Administration > Services** and check the **Log Decoder(s)** then click **View > Config.** 

•	vm3099_log_Decoder	0	vm3099_log_Decoder	Log Decoder	10.5.	0.0.5307	<b>\$</b> 📀	
•	vm3101 - Concentrator	٠	vm3101	Concentrator	10.	System	View >	
0	vm3108.pe.rsa.net - Warehouse Connector	0	vm3108.pe.rsa.net	Warehouse Connector		Stats Config	Edit	
0	vm3109.pe.rsa.net - Warehouse Connector	0	vm3109.pe.rsa.net	Warehouse Connector		Explore	Start	
					- 1	Security	Restart	

2. From the **Service Parses Configuration** window, scroll down to the device you wish to disable and uncheck the Config Value checkbox.

Service Parsers Configuration	E	nable All	Disable All
Name	Config Value		
rsaaccessmanager			*
rsaacesrv			

3. Click **Apply** to save settings.

#### **NetWitness Remove Device Parser**

To remove the NetWitness Integration Package files from the environment, perform the following:

- 1. Connect to the NetWitness Log Decoder/Collector Server using SSH and open the /etc/netwitness/ng/envision/etc/devices folder.
- 2. Search for the device you are targeting for removal and delete the folder containing the device xml.
- 3. Returning the system to its original state will require either modifying or removing the **table-map-custom.xml** based on your systems configuration. The table-map-custom.xml file is located in the /etc/netwitness/ng/envision/etc folder of the NetWitness Log Decoder(s).
